SOLID ROCK LTD

The powered **RazerLift** is the next generation of vehicle cargo management. The fully automated system provides the best **cargo accessibility** and **cargo flexibility** on the market, all with the *press of a button.*

worker safety

cargo efficiency

improved ergonomics

Engineered for:

- Ergonomics
- Efficiency
- Capacity
- Reliability

Suitable for:

- Medium / High roof vans
- Low roof / traditional vans
- Truck canopies (all sizes)
- Other

Features:

- 150 lb lifting capacity per side
- Powered, automated
- Cargo flexibility
- Strong, safe and reliable
- Customizable with bolt-to channels
- Single or dual-side mounting
- Minimal wind noise
- Engineered to ISO standards
- Weather tested
- Patented in Canada, US and EU

So here's the problem:

- A taller van / work truck slip-in unit is better inside, but
- It makes accessing roof top cargo nearly impossible.

Existing roof-top drop-down technology leaves much to be desired:

- Only one ladder per side
- Awkward overhead reaching with a detachable handle to activate
- Ergonomically questionable
- Very limited cargo options

The RazerLift advantage:

- Fully powered and automated
- Cargo flexibility
 - One, two or three ladders
 - Conduit tube containers
 - Combinations of the above
 - Other cargo possibilities
- No overhead loading, unloading or operation
- Reduces the need to load / unload street-side

Welcome to the future of vehicle cargo management!
